Summary

My name is Koen, I am a frontend developer based in Amsterdam, passionate about building innovative and efficient web solutions. While I want to continue growing in frontend in the short term, I would also like to grow into a fullstack role in the long term. I am detail-oriented, enjoy getting things 'right' the first time, and love learning about new technologies.

Projects

OpenContinuity October 2025 - present

<https://github.com/gorgabal/OpenContinuity/>

Founded a free and open source webapp for monitoring continuity on a movie set. I am the sole developer, developing both the frontend and the backend.

Technologies involved: PWA, RxDB, React, Vite

Experience

SchouteICT.nl October 2025 - present
Founder Amsterdam

<https://schouteict.nl>

Freelance web development for small companies. Currently involved in building a webapp for movie production purposes.

Synetic Augustus 2022 - Februari 2025
Web Developer Haarem

<https://synetic.nl/>

Web development within a dynamic agency. I developed web experiences for enterprise customers within the Drupal framework, as well applied technologies such as Twig, Tailwind and Vue.js. I protected to our ISO 27001 certification through applying checks and designing risk-countermeasures, while also assisting the auditors.

Synetic also transitioned to autonomous teams during my time there, which allowed me to increase my involvement within the company.

Synetic Februari 2022 - Augustus 2022
Graduation Internship Haarem

<https://synetic.nl/>

I conducted research to determine if the Web Components standard could be used to create a framework-independent library of standard components for multiple customers.

eVerbinding March 2020 - September 2020
Junior C# Development Woerden

<https://everbinding.nl>

C# Backend development for automated invoicing and administration

Interests

Free and open source software

Linux

Kroot

Web Development

<https://kroot.dev/>

Vue.js web application development within a startup.
